Before...

Wireless broadband enable anyone to work anywhere with the same information held on their office systems but whilst enterprises recognise the need for mobile working they are acutely concerned about the risk of data-carrying devices being lost or stolen.

Now, DATA MOTION has developed AIRBOOK, a completely new mobile data system that is immune to information loss and designed to give any enterprise the confidence they seek to universally deploy mobile computing.

With AIRBOOK, anyone can now work in a remote and secure manner in order to gain the same power of information held on their office systems.

AIRBOOK is a completely new form of mobile computing which has no data memory. By rapidly transmitting virtual images instead of physical data, AIRBOOK operates without a memory to prevent mobile data been lost or stolen.

Mobile computing with exceptional levels of security and speed of use, where each device and each user is uniquely authenticated and all transmissions are encrypted to ensure all data remains protected within the enterprise network.

The AIRBOOK 3G DONGLE is ready to connect to any PC to combine 3G wireless broadband with rapid access to any live enterprise data. The innovative system is a solution that can be used from the start to the finish and neither the hardware nor the software will need replacing.

AIRBOOK is low cost, immune to data loss and worthless if it falls into the wrong hands.

After... (with errors and edits highlighted)

Wireless broadband enables (3rd person singular verb ending) anyone to work anywhere with the same information held on their office systems; but whilst enterprises recognise the need for mobile working, they are acutely concerned about the risk of data-carrying devices being lost or stolen. (lengthy sentence broken up by correct punctuation for easier reading)

Now, DATA MOTION has developed AIRBOOK, a completely new mobile data system that is immune to information loss and designed to give any enterprise the confidence they seek to universally deploy mobile computing.

With AIRBOOK, anyone can now work remotely and securely with the same power of information held on their office systems. (edited to retain the same meaning within a more concise sentence)

AIRBOOK is a completely new form of mobile computing which has no data memory. By rapidly transmitting virtual images instead of physical data, AIRBOOK operates without a memory to prevent mobile data being (error not picked up by computer spell-check) lost or stolen.

Mobile computing with exceptional levels of security and speed of use, where each device and each user is uniquely authenticated and all transmissions are encrypted to ensure all data remains protected within the enterprise network.

The AIRBOOK 3G DONGLE is ready to connect to any PC to combine 3G wireless broadband with rapid access to any live enterprise data. The innovative system is a complete end to end solution and requires no replacement hardware or software. (edited for a more concise and powerful sentence)

AIRBOOK is low cost, immune to data loss and worthless if it falls into the wrong hands.

Client testimonial: "I am delighted with the services offered by English Complete. Stuart delivered excellent work for us in a very quick time and really helped Airbook to deliver the best quality message. I have already recommended English Complete's services to other friends' businesses."
